CONTENTS TO VOLUME 73

PART 1 13 JANUARY 1976

Equilibrium and near-equilibrium turbulent boundary layers. M. R. HEAD *page* 1

The calculation of near-wake flows. S. B. POPE and J. W. WHITELAW 9

Hydraulic jumps in an incompressible stratified fluid. C. H. SU 33

Fluctuating heat transfer from hot wires in low Reynolds number flow. HUW G. DAVIES 49

Computation of the flow between a rotating and a stationary disk. S. M. ROBERTS and J. S. SHIPMAN 53

The stability of natural convection in a vertical fluid layer. JIRO MIZUSHIMA and KANEFUSA GOTOH 65

Solid-particle motion in two-dimensional peristaltic flows. TIN-KAN HUNG and THOMAS D. BROWN 77

Structural development of gas–liquid mixture flows. R. A. HERRINGE and M. R. DAVIS 97

Propagation of internal Alfvén–acoustic–gravity waves in a perfectly conducting isothermal compressible fluid. N. RUDRAIAH, M. VENKATACHALAPPA and P. KANDASWAMY 125

Linearized theory of axisymmetric hypersonic source flow past bodies of revolution. M. YASUHARA, H. MITOME and F. NAKAO 139

Stability of Hagen–Poiseuille flow with superimposed rigid rotation. P.-A. MACKRODT 153

Experimental investigation of turbulent shear flow with quadratic mean-velocity profiles. H. K. RICHARDS and J. B. MORTON 165

REVIEWS

Mathematical Biofluiddynamics, by M. J. Lighthill 189

Cours de Mécanique des Milieux Continus, volume 1, *by P. Germain* 191

PART 2 27 JANUARY 1976

The stability of planetary waves on a sphere. P. G. BAINES 193

A numerical simulation of Kelvin–Helmholtz waves of finite amplitude. P. C. PATNAIK, F. S. SHERMAN and G. M. CORCOS 215

Vorticity concentration and the dynamics of unstable free shear layers. G. M. CORCOS and F. S. SHERMAN 241

The turbulence structure of a highly curved mixing layer. I. P. Castro and P. Bradshaw *page* 265

The initial region of subsonic coaxial jets. N. W. M. Ko and A. S. H. Kwan 305

Internal electrohydrodynamic instability and mixing of fluids with orthogonal field and conductivity gradients. James F. Hoburg and James R. Melcher 333

Axisymmetric convection in a cylinder. C. A. Jones, D. R. Moore and N. O. Weiss 353

Thermally driven flow in a gas centrifuge with an insulated side wall. Takuya Matsuda, Kiyoshi Hashimoto and Hidenori Takeda 389

Part 3 10 February 1976

A rational model for Langmuir circulations. A. D. D. Craik and S. Leibovich 401

Long-wave decay due to convective turbulence. Theodore Green and See Whan Kang 427

Relation between Nusselt number and Rayleigh number in turbulent thermal convection. Robert R. Long 445

An experimental investigation of the detention of airborne smoke in the wake bubble behind a disk. W. Humphries and J. H. Vincent 453

The planar turbulent jet. E. Gutmark and I. Wygnanski 465

A numerical study of the temporal eigenvalue spectrum of the Blasius boundary layer. Leslie M. Mack 497

Hydraulic control by a wide weir in a rotating fluid. E. Sambuco and J. A. Whitehead 521

A study of a stably stratified hydromagnetic fluid in a rotating cylinder. David E. Loper 529

Turbulent flow past a porous plate. J. M. R. Graham 565

Part 4 24 February 1976

Brownian motion in thin sheets of viscous fluid. P. G. Saffman 593

Self-similar, time-dependent flows with a free surface. Michael S. Longuet-Higgins 603

Inviscid secondary motions in a tube of slowly varying ellipticity. Ian J. Sobey 621

Magnetohydrodynamic flow due to the discharge of an electric current in a hemispherical container. C. Sozou and W. M. Pickering 641

The focusing of weak shock waves. B. Sturtevant and V. A. Kulkarny *page* 651

Velocity measurements close to a rough plate oscillating in its own plane. D. C. Keiller and J. F. A. Sleath 673

An experimental study of turbulent convection in air. Daniel E. Fitzjarrald 693

The stability of short waves on a straight vortex filament in a weak externally imposed strain field. Chon-Yin Tsai and Sheila E. Widnall 721

Laminar flow in a curved pipe with varying curvature. S. Murata, Y. Miyake and T. Inaba 735

The influence of jet flow on jet noise. Part 1. The noise of unheated jets. R. Mani 753

The influence of jet flow on jet noise. Part 2. The noise of heated jets. R. Mani 779

JOURNAL OF FLUID MECHANICS

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretical and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. G. K. BATCHELOR, DR H. K. MOFFATT

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS

PROF. G. F. CARRIER, *Pierce Hall, Harvard University, Cambridge, Massachusetts* 02138, *U.S.A.*

PROF. S. H. DAVIS, *Department of Mechanics and Materials Science, The Johns Hopkins University, Baltimore, Maryland* 21218, *U.S.A.*

PROF. W. C. GRIFFITH, *Mechanical and Aerospace Engineering, North Carolina State University, Raleigh, North Carolina* 27607, *U.S.A.*

PROF. M. J. LIGHTHILL, *Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England*

PROF. J. W. MILES, *Institute of Geophysics and Planetary Physics, A-025, University of California, La Jolla, California* 92093, *U.S.A.*

PROF. J. R. A. PEARSON, *Department of Chemical Engineering and Chemical Technology, Imperial College, London SW7 2AZ, England*

PROF. O. M. PHILLIPS, *Department of Earth and Planetary Sciences, The Johns Hopkins University, Baltimore, Maryland* 21218, *U.S.A.*

PROF. J. S. TURNER, *Research School of Earth Sciences, The Australian National University, P.O. Box 4, Canberra* 2600, *Australia*

ASSISTANT EDITORS

DR H. E. HUPPERT (*Cambridge*), DR M. E. MCINTYRE (*Cambridge*)

EDITORIAL ASSISTANT

MISS M. E. LUCKING (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any editor named above, choosing one in their own country where possible. The submission of two or three copies will expedite the process of assessment, although it may not be possible to return all these copies. Original drawings for figures should not be sent until the paper is accepted.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts for the printer should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript.

Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

For permission to reproduce material from *Journal of Fluid Mechanics*, please apply to the London or New York office of Cambridge University Press.

ISI Tear Service, 325 Chestnut Street, Philadelphia, Pennsylvania 19106, U.S.A. is authorized to supply single copies of separate articles for private use only.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published in six volumes of four parts; twice monthly. Single parts cost £5.50 net (US $15.00 in the U.S.A. and Canada) plus postage. The subscription price (which includes postage) to volumes 73–78, 1976, is £17.50 net per volume (US $47.50 in the U.S.A. and Canada). Copies of the journal for subscribers in the U.S.A. and Canada are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y. Claims for missing issues will be considered only if made immediately upon receipt of the subsequent issue.

CONTENTS TO VOLUME 74

PART 1 9 MARCH 1976

Brownian diffusion of particles with hydrodynamic interaction. G. K. BATCHELOR *page* 1

Numerical simulation of the transition from three- to two-dimensional turbulence under a uniform magnetic field. U. SCHUMANN 31

Viscous boundary layers in reversing flow. T. J. PEDLEY 59

The dispersion of a buoyant solute in laminar flow in a straight horizontal pipe. Part 1. Predictions from Erdogan & Chatwin's (1967) paper. N. G. BARTON 81

The dispersion of a buoyant solute in laminar flow in a straight horizontal pipe. Part 2. The approach to the asymptotic state. N. G. BARTON 91

Axisymmetric turbulent boundary layer along a circular cylinder at constant pressure. NOOR AFZAL and R. NARASIMHA 113

Thermosolutal convection in a solution with a large negative Soret coefficient. DOUGLAS R. CALDWELL 129

Non-equilibrium ideal-gas dissociation after a curved shock wave. H. G. HORNUNG 143

Large amplitude lunate-tail theory of fish locomotion. M. G. CHOPRA 161

Internal waves in a circular channel. W. H. YANG and CHIA-SHUN YIH 183

PART 2 23 MARCH 1976

The far field of high frequency convected singularities in sheared flows, with an application to jet-noise prediction. THOMAS F. BALSA 193

On the two-dimensional mixing region. F. H. CHAMPAGNE, Y. H. PAO and I. J. WYGNANSKI 209

Turbulence correlations in a compressible wake. A. DEMETRIADES 251

The maintenance of turbulent shear stress in a mixing layer. IAN S. F. JONES 269

Laminar film flow on a cylindrical surface. ERNST BECKER 297

The distortion of a flexible inextensible thread in a shearing flow. E. J. HINCH 317

On a rotational flow disturbed by gravity. H. P. GREENSPAN 335

CONTENTS TO VOLUME 74

PART 1 9 MARCH 1976

Brownian diffusion of particles with hydrodynamic interaction. G. K. BATCHELOR *page* 1

Numerical simulation of the transition from three- to two-dimensional turbulence under a uniform magnetic field. U. SCHUMANN 31

Viscous boundary layers in reversing flow. T. J. PEDLEY 59

The dispersion of a buoyant solute in laminar flow in a straight horizontal pipe. Part 1. Predictions from Erdogan & Chatwin's (1967) paper. N. G. BARTON 81

The dispersion of a buoyant solute in laminar flow in a straight horizontal pipe. Part 2. The approach to the asymptotic state. N. G. BARTON 91

Axisymmetric turbulent boundary layer along a circular cylinder at constant pressure. NOOR AFZAL and R. NARASIMHA 113

Thermosolutal convection in a solution with a large negative Soret coefficient. DOUGLAS R. CALDWELL 129

Non-equilibrium ideal-gas dissociation after a curved shock wave. H. G. HORNUNG 143

Large amplitude lunate-tail theory of fish locomotion. M. G. CHOPRA 161

Internal waves in a circular channel. W. H. YANG and CHIA-SHUN YIH 183

PART 2 23 MARCH 1976

The far field of high frequency convected singularities in sheared flows, with an application to jet-noise prediction. THOMAS F. BALSA 193

On the two-dimensional mixing region. F. H. CHAMPAGNE, Y. H. PAO and I. J. WYGNANSKI 209

Turbulence correlations in a compressible wake. A. DEMETRIADES 251

The maintenance of turbulent shear stress in a mixing layer. IAN S. F. JONES 269

Laminar film flow on a cylindrical surface. ERNST BECKER 297

The distortion of a flexible inextensible thread in a shearing flow. E. J. HINCH 317

On a rotational flow disturbed by gravity. H. P. GREENSPAN 335

Nonlinear effects in edge waves. G. B. Whitham *page* 353

Nonlinear edge waves and shallow-water theory. A. A. Minzoni 369

Nonlinear energy transfer and the energy balance of the internal wave field in the deep ocean. Dirk J. Olbers 375

Part 3 6 April 1976

Mass transport in the bottom boundary layer of cnoidal waves. M. De St Q. Isaacson 401

Free convection and the burning of a horizontal fuel surface. J. F. Clarke and N. Riley 415

Application of central-limit theorems to turbulence and higher-order spectra. J. L. Lumley and K. Takeuchi 433

Structure of a linear array of hollow vortices of finite cross-section. G. R. Baker, P. G. Saffman and J. S. Sheffield 469

Oxygen vibrational and dissociation relaxation behind regular reflected shocks. H. Oertel 477

Density profiles in argon and nitrogen shock waves measured by the absorption of an electron beam. H. Alsmeyer 497

The structure of jets from notched nozzles. S. S. Pannu and N. H. Johannesen 515

Convective amplification of real simple sources. Ann Dowling 529

Intrusion into a stratified fluid. P. C. Manins 547

Supersonic viscous flow over cones at large angles of attack. Clive A. J. Fletcher and Maurice Holt 561

Part 4 22 April 1976

Contribution towards a Reynolds-stress closure for low-Reynolds-number turbulence. K. Hanjalić and B. E. Launder 593

A macromolecule transport model for the arterial wall and endothelium based on the ultrastructural specialization observed in electron microscopic studies. Sheldon Weinbaum and Colin G. Caro 611

The locking-on of vortex shedding due to the cross-stream vibration of circular cylinders in uniform and shear flows. P. K. Stansby 641

On the interaction of surface and internal gravity waves: uniformly valid solution by extended stationary phase. B. A. Hughes 667

Single-wave run-up on sloping beaches. Lester Q. Spielvogel 685

An experimental and theoretical study of natural convection in the annulus between horizontal concentric cylinders. T. H. KUEHN and R. J. GOLDSTEIN *page* 695

The effects of trailing vorticity on the flow through highly loaded cascades. JAMES E. MCCUNE and WILLIAM R. HAWTHORNE 721

A complete second-order theory for the unsteady flow about an airfoil due to a periodic gust. M. E. GOLDSTEIN and H. ATASSI 741

Intermittency of coherent structures in the core region of fully developed turbulent pipe flow. JEAN SABOT and GENEVIÈVE COMTE-BELLOT 767

Corrigendum 797

JOURNAL OF FLUID MECHANICS

The JOURNAL OF FLUID MECHANICS exists for the publication of theoretical and experimental investigations of all aspects of the mechanics of fluids.

EDITORS

PROF. G. K. BATCHELOR, DR H. K. MOFFATT

Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England

ASSOCIATE EDITORS

PROF. G. F. CARRIER, *Pierce Hall, Harvard University, Cambridge, Massachusetts* 02138, *U.S.A.*

PROF. S. H. DAVIS, *Department of Mechanics and Materials Science, The Johns Hopkins University, Baltimore, Maryland* 21218, *U.S.A.*

PROF. W. C. GRIFFITH, *Mechanical and Aerospace Engineering, North Carolina State University, Raleigh, North Carolina* 27607, *U.S.A.*

PROF. M. J. LIGHTHILL, *Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, England*

PROF. J. W. MILES, *Institute of Geophysics and Planetary Physics, A–025, University of California, La Jolla, California* 92093, *U.S.A.*

PROF. J. R. A. PEARSON, *Department of Chemical Engineering and Chemical Technology, Imperial College, London SW7 2AZ, England*

PROF. O. M. PHILLIPS, *Department of Earth and Planetary Sciences, The Johns Hopkins University, Baltimore, Maryland* 21218, *U.S.A.*

PROF. J. S. TURNER, *Research School of Earth Sciences, The Australian National University, P.O. Box 4, Canberra* 2600, *Australia*

ASSISTANT EDITORS

DR H. E. HUPPERT (*Cambridge*), DR M. E. MCINTYRE (*Cambridge*)

EDITORIAL ASSISTANT

MISS M. E. LUCKING (*Cambridge*)

Authors wishing to have papers published in the JOURNAL should communicate them to any editor named above, choosing one in their own country where possible. The submission of two or three copies will expedite the process of assessment, although it may not be possible to return all these copies. Original drawings for figures should not be sent until the paper is accepted.

Authors are urged to write their papers clearly and attractively, in order to ensure that their work will be readily accessible to readers.

Manuscripts for the printer should be typed in double spacing on one side of the paper only, with references listed at the end in alphabetical order of authors. Drawings should be done in Indian ink on plain white or transparent paper, and should not be larger than 40 cm by 60 cm. Lettering should be shown clearly in pencil for reproduction by the printer, and as far as possible information relating to a figure should be placed in the caption rather than on the figure. A typed list of captions should be provided at the end of the manuscript.

Proofs of papers from overseas will usually be despatched to authors by airmail. There is no charge for publication. Authors are entitled to 50 offprints of a paper in the JOURNAL free of charge, and additional offprints can be purchased if ordered in advance.

For permission to reproduce material from *Journal of Fluid Mechanics*, please apply to the London or New York office of Cambridge University Press.

ISI Tear Service, 325 Chestnut Street, Philadelphia, Pennsylvania 19106, U.S.A. is authorized to supply single copies of separate articles for private use only.

SUBSCRIPTIONS

The JOURNAL OF FLUID MECHANICS is published in six volumes of four parts; twice monthly. Single parts cost £5.50 net (US $15.00 in the U.S.A. and Canada) plus postage. The subscription price (which includes postage) to volumes 73–78, 1976, is £17.50 net per volume (US $47.50 in the U.S.A. and Canada). Copies of the journal for subscribers in the U.S.A. and Canada are sent by air to New York to arrive with the minimum delay. Second class postage is paid at New York, N.Y. Claims for missing issues will be considered only if made immediately upon receipt of the subsequent issue.

CONTENTS TO VOLUME 75

PART 1 13 MAY 1976

Taylor-vortex instability and annulus-length effects. J. A. COLE *page* 1

The low frequency sound from multipole sources in axisymmetric shear flows. Part 2. M. E. GOLDSTEIN 17

Observations on turbulent-drag reduction in a dilute suspension of clay in sea-water. GISELHER GUST 29

Axisymmetric convection in a rotating sphere. Part 1. Stress-free surface. A. D. WEIR 49

An experimental study of the effects of Prandtl number on thermal convection in a rotating, differentially heated cylindrical annulus of fluid. JAY S. FEIN and RICHARD L. PFEFFER 81

Numerical simulation of three-dimensional Bénard convection in air. FRANK B. LIPPS 113

On the normal modes of parallel flow of inviscid stratified fluid. W. H. H. BANKS, P. G. DRAZIN and M. B. ZATURSKA 149

On the flow in an annulus surrounding a whirling cylinder. CHRISTOPHER BRENNEN 173

PART 2 27 MAY 1976

Experiments on transition to turbulence in an oscillatory pipe flow. MIKIO HINO, MASAKI SAWAMOTO and SHUJI TAKASU 193

A comparison of the wake structure of a stationary and oscillating bluff body, using a conditional averaging technique. M. E. DAVIES 209

Wakes in stratified flow past a hot or cold two-dimensional body. G. E. ROBERTSON, J. H. SEINFELD and L. G. LEAL 233

Vortex shedding from a cylinder vibrating in line with an incident uniform flow. OWEN M. GRIFFIN and STEVEN E. RAMBERG 257

Axisymmetric Stokes flow past a spherical cap. J. M. DORREPAAL, M. E. O'NEILL and K. B. RANGER 273

The instability of a stratified periodic boundary layer. CHRISTIAN VON KERCZEK and STEPHEN H. DAVIS 287

The stability of the decaying flow in a suddenly blocked channel. P. HALL and K. H. PARKER 305

Unsteady flow in a branch. V. O'BRIEN, L. W. EHRLICH and M. H. FRIEDMAN 315

The dispersion relation for a nonlinear random gravity wave field. NORDEN E. HUANG and CHI-CHAO TUNG 337

Nonlinear ship-wave theories by continuous mapping. F. NOBLESSE and G. DAGAN 347

Experimental investigation of shock waves in liquid helium I and II. JOHN C. CUMMINGS *page* 373

Stability of natural convection in a narrow rotating annulus. SEPPO A. KORPELA and VEDAT S. ARPACI 385

PART 3 11 JUNE 1976

The turbulent radial jet. P. O. WITZE and H. A. DWYER 401

Nonlinear surface waves in closed basins. JOHN W. MILES 419

The viscous damping of cnoidal waves. MICHAEL DE ST Q. ISAACSON 449

A boundary-layer model of flow in a porous medium at high Rayleigh number. J. L. ROBINSON and M. J. O'SULLIVAN 459

Evaporation from a cylindrical surface into vacuum. C. J. KNIGHT 469

The hydrodynamic stability of rapidly evaporating liquids at reduced pressure. HARVEY J. PALMER 487

Non-axisymmetric instability of a rotating sheet of gas in a rotating environment. TAKEO SAKURAI 513

Solutions of the Navier–Stokes equations for vortex breakdown. W. J. GRABOWSKI and S. A. BERGER 525

Low-frequency approximations in unsteady small perturbation subsonic flows. R. K. AMIET 545

The generation of sound by two-phase nozzle flows and its relevance to excess noise of jet engines. O. J. WHITFIELD and M. S. HOWE 553

Stability of tubular film flow: a model of the film-blowing process. Y. L. YEOW 577

The discrete-cilia approach to propulsion of ciliated micro-organisms. N. LIRON and S. MOCHON 593

PART 4 25 JUNE 1976

On the difference between a bounding surface and a material surface. E. B. DUSSAN V. 609

Linear stability of modulated circular Couette flow. P. J. RILEY and R. L. LAURENCE 625

The phase configuration of waves around a body moving in a rotating stratified fluid. K. S. PEAT and T. N. STEVENSON 647

Diffusion of weak magnetic fields by isotropic turbulence. ROBERT H. KRAICHNAN 657

Hydromechanics of low-Reynolds-number flow. Part 4. Translation of spheroids. ALLEN T. CHWANG and THEODORE Y. WU 677

The equilibrium statistical mechanics of simple quasi-geostrophic models. RICK SALMON, GREG HOLLOWAY and MYRL C. HENDERSHOTT 691

Slender-body theory for slow viscous flow. JOSEPH B. KELLER and SOL I. RUBINOW *page* 705

The propagation of dislocations in Rayleigh–Bénard rolls and bimodal flow. J. A. WHITEHEAD 715

Vortex shedding from a blunt trailing edge with equal and unequal external mean velocities. D. R. BOLDMAN, P. F. BRINICH and M. E. GOLDSTEIN 721

Experiments to investigate transport processes in the near wakes of disks in turbulent air flow. W. HUMPHRIES and J. H. VINCENT 737

Multi-valued solutions of steady-state supersonic flow. Part 1. Linear analysis. L. F. HENDERSON and J. D. ATKINSON 751

The deformation of a nearly straight thread in a shearing flow with weak Brownian motions. E. J. HINCH 765

On the Oseen linearization of the swirling-flow boundary layer. K. K. TAM 777

On the short surface waves due to an oscillating, partially immersed body. A. M. J. DAVIS 791
